

OPTIONAL EXTRAS

POOL HEATER – From £100.00 per week

We recommend that you take this option between the months of October through to March if you wish to use the pool. Gas pool heaters are expensive to operate. The pump turns on whenever the pool filter is on for approximately 7 to 9 hours a day. The desired water temperature is set at 86°F. However, if the air temperature drops below 50°F, the pump will not be able to operate as they rely on sucking warm air in as part of its operation. Although the pump will still be operating, it will not be able to heat the water. Unfortunately, the operating cost remains the same and no refund can be made. In saying that, the normal average temperature does not drop below 50°F.

If there is a pool blanket supplied please replace this whenever the pool is not in use. This will retain the heat in the pool and thus allow you more swimming time. Also, please take extra special care with whilst around the swimming area when the covers are in place. Please see Terms & Conditions for disclaimer.
